PROJECTS

Interview performance analysis using facial emotion and speech recognition

May 2023

This project is to develop a system that can address the limitations of traditional recruitment processes by reducing bias, improving efficiency and accuracy, promoting standardization, and providing a cost-effective solution for businesses of all sizes.

Develop a system that can analyze and evaluate the performance of candidates.

Convolutional Neural Network model for garbage classification

June 2021

This project is to build a convolutional neural network model for waste material classification. Created using Python and machine learning, which classify the waste material into six different divisions, i.e Plastic, paper, cardboard, Glass, Metal and Trash. This classification is done using three models Inception V3 model, Xception model and VGG-16 model.

ACHIEVEMENTS

Participated in college level coding hackathon

Solving coding problems on various coding platforms

CERTIFICATIONS

IoT training : Code Nautics

Python Training : Epiphany HI PVT LTD
